

IVY Interview questions:

C# :

1. Can we keep properties and events in the interface?
2. Diff between method overloading and overriding
3. why we will use interface we can do everything with abstract class
4. Why we use interface
4. How we can avoid duplicate code Using interface or Abstract class
5. Can Abstract have constructor if so what is the use of that
6. Advantage of interfaces
7. How we can achieve multiple inheritance
8. How we can achieve method hiding
9. In abstract is it mandatory declare abstract method
10. What is the diff b/w sealed class and static class
11. Explain Method overloading and method overriding
12. What is garbage collection
13. How object generation come into picture in garbage collection
14. Can we have multiple catch block in c#
15. What is delegate
16. What is the use of delegate
17. How many types of delegate we have in c#
18. What is anonymous method
19. what is diff b/w func and action
20. In c# how can pass function as parameter to method
21. What is boxing and unboxing

Web API:

1. What is web api
2. What are the http verb in web api
3. What is patch in http verb
4. What is the diff b/w http.post and http.put
5. What are all types of routing we have in web api
6. What are all route constraint in web api
7. what is content negotiation
8. How many ways we can achieve web API versioning
9. How you handled exception raised in web API
10. what are all life cycles services have in .net core
11. what is the scope of service object if it resolved using service.scoped
12. how you achieved dependency injection in .net core
13. have you ever created custom middleware in .net core and where ?
14. which design pattern did you worked ?
15. how you log your exception.

People Tech group:

1. How you implemented security to web applications.
2. What is the use of Program and Startup in .net core.
3. Diff b/w ConfigureServices and Configure in Startup.cs
4. What are the life cycles for services
5. What is the diff b/w Transient and Scoped.
6. What is .Net standard and why we will use
7. What is diff b/w Linq and Lamda expressions
8. Which is more efficient Linq or Lamda expressions
9. How we can insert 10000 records using ef core.
10. How we can read 1GB file with 500MB ram.
11. How we can deserialize json which is not form like (one property is int in some records and object in some records)
12. How we will make service calls in angular.
13. Diff b/w Promise and Observable.
14. How can we communicate components?

IVY

1. What is tuple and use case in c#
2. What is ref and out and use case in c#
3. What is Func and Action and use case in c#
4. How to implement Get hash code and equals functionality in c#.
5. Which design pattern you worked.
6. What is the Singleton pattern?
7. What is a Facade Pattern?
8. What is Factory Pattern?
9. What are extension method in c#.
10. What are the advantages of moving to .Net core from .Net framework.
11. Significance of Configure and ConfigureServices methods in Startup.cs.
12. What is the diff between AddScoped and AddTransient services?
13. How we can implement logging in .Net core.
14. How we can log details in File and Database.
15. What are elastic queries?
16. How you implemented the retry mechanism in .net core.
17. How we can delay calling methods after failure.
18. Have you worked on performance counters?
19. Which common lifecycle hook you used in angular.
20. Diff b/w observable and promise.
21. Diff between eager loading and lazy loading.
22. Which one is by default in angular Promise/Observable.
23. How you validate user on every request in angular.
24. What is an interceptor in angular and usage.
25. Way to call method before page refresh in angular.
26. RFJS separators in angular.
27. How to pass output of request as input to second request in angular.

28. How you write any custom pipes and how you write.
29. Have written any custom directives.
30. How to mention json response in Web API.
31. How you mentioned complex object type constraint in Web API.
32. Diff b/w unique key and primary key in SQL.
33. Which is proffered column to create index for table in SQL.
34. Significance of merge keyword in sql.
35. Have used cursors and clustered.
36. Sequence and user defined types in SQL.
37. SQL dependency injection.
38. How are you going to optimize your application?
 - a. SQL
 - b. .NET core
 - c. Angular.
39. How you implemented CI/CD.
40. Write a program to print fibonacci series using recurse.
41. Write a program to print the second largest number from an array using one loop.
42. Have you worked on microservices and explain.

CGI

1. Diff b/w readonly and constant in c#.
2. How we can return multiple values from method in c#.
3. Significance of lock keyword in c#.
4. What is the yield keyword and what is the use.
5. Ways to run two methods parallel in C#.
6. What is the Task in c#.
7. Significance for Dependency injection in c#.
8. How we can Dependency injection in .Net framework.
9. How we can log data in each layer c#.
10. What is the purpose of filters in MVC.
11. Diff b/w HttpPost and HttpPut.
12. What is attribute based routing in Web API.
13. What is DbContext in EFCore?
14. Diff b/w Single and First in C#.
15. Benefits of repository pattern in C#.
16. What is factory pattern in C#.
17. What is singleton pattern in C#.
18. To implement a singleton pattern what changes we need to at class level.
19. How we can read values from appsettings.json file in service layer.
20. What are ways to resolve services in .net core.
21. What is trigger in the SQL server.
22. What all aspects we will consider to optimise sql query.
23. Have you been involved in the CI/CD model.

Qualminds:

1. What principles we follow to write WEB API.

2. Advantage of using Repository Pattern.
3. How the Repository pattern different from Data access layer.
4. Which approach you used for Entity Framework.
5. Is it possible to do a Code first approach using existing database.
6. What challenge we will face when we use db first approach.
7. How we will handle store procedure returning multiple dataset in EFCore.
8. Challenges using EF core.
9. What happens when we do entity.Detach in EF core.
10. Can we run parallel operation using EF core.
11. How we can return file from Web API.
12. How we can upload two files and what changes we need to do at Web Api.
13. Have you worked on Web sockets or SignalR if yes what is the Use case.
14. What is content negotiation in Web API.
15. How we can return XML response in Web Api.
16. Compress of response in Web Api.
17. Custom request header in Web Api.
18. How we can read values from Request header in Web Api.
19. Where HttpContext defined or initialized.
20. How can build and deploy application windows/Web.
21. What changes we need to deploy to deploy in Linux.
22. Explain about Azure CI/CD.
23. How we can create environment variables in Azure CI/CD.
24. What type of authentication used in SQL Server.
25. How do you secure you configure files in Azure.
26. Have you written any Test case in .Net.
27. What unit test framework used for writing test cases.
28. How we can mock Db context.
29. How we can mock HttpContext.
30. Can we create schemas which does not store invalid data in mongo db.
31. Can you explain Microservices architecture?
32. Ways to sync data between two different micro services.
33. How we can write left join in linq query.

MindTree:

1. Difference between angular and angularjs.
2. How ways databinding in angular.
3. What is angular expression.
4. Controllers in Angular.
5. What are nested controllers.
6. What you are doing in current application using angular.
7. Have you work MongoDB and what is the use.
8. Datatypes in MongoDB.
9. Closures in javascript.
10. What is the advantage of .Net core.

11. Are you aware of IIS 6 and what is application pools.
12. What are all tabs available in creating new application pools.
13. Flex in CSS.
14. If I want flex in hierarchical manner how you will do.
15. What is the use of filters.
16. Types of Filters in MVC.
17. What Controller level filters in MVC.
18. Difference between Variables and filters.
19. What is purpose of SQL server and SQL.
20. Difference between Truncate and Delete.
21. What type of partitions in sql.
22. Datatypes in SQL.
23. Difference between nvarchar and varchar
24. What is cache controller in MVC.
25. Types of cache of controllers in MVC.
26. How you can delete duplicates in SQL tables and syntax.

TCS :

1. Role in current project.
2. What are the features you liked and implemented in Web API.
3. What is the restful API.
4. What is expansion of Restful API.
5. What kind of verb used in Web API.
6. What is diff between put and post.
7. How you will authenticate ur Web API.
8. To authenticate Web API with token/role based what changes we need to do.
9. What is input parameter type if you post data to web api.
10. What is CORS error and how we handle it?
11. What are the ways we can pass parameters to Web API.
12. How we will validate parameters of Web API.
13. What is the diff between pass by parameter and query string parameter.
14. What is sync and async in Web api.
15. How you will call dependent apis async or sync.
16. How you will unit test ur web api.
17. Why we will do unit testing generally.
18. Can we test private method.
19. If I want to test private method what should I do.
20. What are the status codes written by web api
21. If we are inserting data using post what are all status codes returned.
22. Do you know about dependency injection
23. How .Net core is supporting dependency injection in built.
24. What you will achieve by using dependency injection.
25. Have used generic concepts in c# and what exactly.
26. What benefit you will get by using generic.
27. Diff between IQueryable and IEnumerable.

28. Have you used static class and can i have a constructor with parameters if yes how if not why ?
29. How we can hide method in C#.
30. What you prefer to use: Interface or abstract.
31. Any performance change in using Interface or abstract.
32. What are the rules we need to follow to mention optional parameters.
33. Major diff between Interface and Abstract.
34. Can i keep private methods in Interface.
35. What error you will see if are overriding method in derive class without new keyword.
36. Virtual vs override vs new keyword in C#.
37. What is the purpose of garbage collector in c#.
38. What we will go for Task.
39. Why we will async mechanism.
40. Can we call the sync method in async method.
41. What await keyword will do while executing.
42. What is TDD.
43. Angular is object based or object oriented.
44. What is the major diff between WCF and Web API.
45. Is Web API support SOAP.
46. How we implemented authorization for Web API.
47. What interface/class you should implement for the authorization filter.

S&P Global:

1. Can you describe what SPA is?
2. What is the advantage with SPA over legacy applications?
3. What are ways we can overload method in c#.
4. When do we use abstract and interface?
5. What is access specifier in methods in Interface.
6. What is the difference between abstract method and virtual method.
7. What is dynamic polymorphism and how will we implement it?
8. Can static class instantiate.
9. What are singleton patterns and how are they used in application?
10. What is diff b/w Stack overflow and out of memory exception.
11. What is generic and How you used in application
12. What is boxing and unboxing?
13. What happens when we attempt to boxing null value.
14. What happens is we try to unbox the string to int.
15. What is serialization and how do you use it?
16. Write code to say the number is palindrome or not.
17. How you worked on SQL and what is your role.
18. How you will troubleshoot sql query.
19. What is diff b/w primary and unique key.
20. What type of index we can create using the primary key.

21. How you will delete duplicates rows without using row index.
22. How you worked on callback functions in javascript.
23. What is promise?
24. How do set time out in javascript.
25. Diff b/w == and === .
26. Write a program to print array of length of strings ?
27. Diff b/w ActionResult and ViewResult.
28. Diff b/w ViewBag and ViewData.
29. How do you connect to sql server in MVC application?
30. How do update use model when you update procedure in mvc.
31. What is partial view and where will use.
32. How do I validate data in mvc ?
33. Can you explain routing in web api.
34. How do you protect your web apis?
35. What filters are in Web Api.
36. What are exception filters ?
37. How do you register exception filter globally in mvc?
38. What is caching and advantages
39. Types of caching Web Api/MVC.
40. How do access elements in JQuery ?
41. What about set and get methods in JQuery.
