

Objective

Full Stack .NET Developer with 4 years of experience in building scalable enterprise applications using C#, ASP.NET Core Web API, React.js, SQL Server, and ADO.NET. Strong expertise in RESTful API development, JWT-based authentication, and micro services architecture. Skilled in database optimization, LINQ query performance, and writing clean, maintainable, high-performance code. Azure Service Bus, Azure Functions, Redis in Azure and delivering secure applications in Agile/Scrum environments.

Professional Summary

Full Stack .NET Developer with 4 years of experience in building cloud-enabled web applications using ASP.NET Core Web API, C#, and 3-tier architecture. Strong experience in developing RESTful microservices using JSON and XML, with Azure integrations leveraging Azure Service Bus, Redis in Azure, Azure Functions, and Azure Key Vault for secure configuration and secrets management. Skilled in creating responsive user interfaces using HTML, CSS, Bootstrap, React.js, and Redux. Solid understanding of OOP principles, dependency injection, ADO.NET, GitHub, and experience working in Agile/Scrum environments.

Technical Expertise

Microsoft Technologies	: ASP.NET Core, Dot NET Core Web API
Database	: SQL Server, LINQ, ADO.NET
Architecture	: 3-Tier Layered Architecture
Source Control	: GitHub
Client-Side Technologies	: HTML5, CSS3, Bootstrap
Client-Side Scripting	: React.js
Programming Languages	: C#
Host	: IIS
Cloud & DevOps	: Microsoft Azure Functions, Azure Service Bus, Azure key Vault.
Development Tools	: Visual Studio 2022, Visual Studio Code, SSMS
API & Testing Tools	: Swagger, Postman

Key Skills

Backend & Architecture

- C#, ASP.NET Core Web API, ADO.NET, SQL Server, LINQ.
- JWT Authentication, API Gateway (Ocelot / YARP), RESTful API Development

Azure

- Microsoft Azure Functions, Azure Service Bus, Azure key Vault, Redis in Azure.
- GitHub, Version Control, Application Deployment & Monitoring

Frontend & UI Development

- React.js, HTML5, CSS3, Bootstrap
- State Management (React Context), REST API Integration, Responsive UI Design

Testing & Quality Assurance

- xUnit, Moq, Integration Testing, Test-Driven Development (TDD)
- Postman, Swagger, API Testing, Logging & Exception Handling

Educational Qualification

M.C.A (Master of Computer Applications) with 75% from Andhra University in the year of 2014.

Professional Experience

Full Stack Dot Net Developer in Code Tree Software Solutions Pvt. Ltd, Vijayawada, Andhra Pradesh from Oct 2021 to Till Date.

PROJECTS

1. Giribhumi

Client	: Office of Commissioner Tribal Welfare, Government of Andhra Pradesh
Role	: Full Stack Dot Net Developer
Team Size	: 15
Duration	: Dec 2023 – Present
Environment	: Dot NET Core Web API,C#, React.js, Sql Server, Ado.Net, Linq, Swagger, Visual Studio 2022.

Project Description:

Giribhumi Is A State Wide Application Developed To Register And Track Farmer Land Data Across Andhra Pradesh. The System Integrates **Geolocation Services** And **Document Management** To Ensure Accurate And Verifiable Land Ownership Records. Restful Apis Were Designed To Process And Retrieve Land Data For More Than **20,000+ Registered Farmers**. The Solution Also Integrated **Google Maps API** To Capture Precise Latitude-Longitude Coordinates, Improving Location Accuracy By **90%**, And Enabled Secure Document Storage For Multiple File Types (Photos, DLC Documents, GPS Coordinates).

Key Responsibilities:

- Design and develop high-quality software solutions using ASP.NET Core webapi, .NET 8, C#, REST API technologies.
- Develop And Maintain React And React -Based Front-End Applications Integrated With Backend Services
- Design And Implement SQL DB Schema.
- Collaborate with cross-functional teams to gather requirements, prioritize tasks, and deliver solutions that meet business needs.
- Optimize application performance and scalability through effective code design and implementation.
- Follow organizational coding standards and processes to ensure maintainable, high quality, and scalable code.
- Achieve good code coverage through **unit tests, test automation, code reviews**, and by **mentoring junior team members**.

2. E-Farm Marketing – Agricultural Trade Platform

Client:	Government of Andhra Pradesh
Role:	.NET Developer
Team Size:	6
Duration:	Mar 2022 – Dec 2023
Environment:	ASP.NET Core Web api, C#, Ado.Net, LINQ, SQL Server, Bootstrap, jQuery, CSS

Project Description:

E-Farm Marketing is a digital marketplace platform designed to connect **farmers, Farmer Producer Organizations (FPOs)**, and buyers to facilitate online trading of agricultural commodities. The system maintained **RESTful APIs** for real-time listings of more than **1,000+ agricultural products** and incorporated **concurrency handling and caching mechanisms** for improved performance. The platform also enabled **SMS and email notifications** to streamline transactions between buyers and sellers.

Key Responsibilities:

- Design and develop high-quality software solutions using ASP.NET , C#, REST API technologies.
- Develop And Maintain **jQuery** And **jQuery** -Based Front-End Applications Integrated With Backend Services
- Design And Implement SQL DB Schema.
- Collaborate with cross-functional teams to gather requirements, prioritize tasks, and deliver solutions that meet business needs.
- Optimize application performance and scalability through effective code design and implementation.
- Follow organizational coding standards and processes to ensure maintainable, high quality, and scalable code.
- Achieve good code coverage through **unit tests**, **test automation**, **code reviews**, and by **mentoring junior team members**.

3.Media Relations & AIS Officers Portal

Client : Internal Project – Government Department
Role : Trainee Software Developer
Team Size 10
Duration : Oct 2021 – Mar 2022
Environment : ASP.NET, C#.NET, jQuery, SQL Server, HTML, CSS

Project Description:

The Media Relations & AIS Officers Portal is a centralized system designed to manage **press releases, officer directories, and crisis communication workflows**. The application enables **role-based access control, audit logging, and automated notifications** for efficient coordination between media personnel and officers. Developed with a **responsive jQuery-driven UI** and a **SQL Server backend** using stored procedures for secure data transactions.

Key Responsibilities:

- Designed and developed **RESTful APIs** and **ASP.NET controllers** for managing officers, press releases, and media queries.
- Implemented core **business logic** including approval workflows, publication rules, and notification triggers.
- Secured application endpoints using **role-based authorization** with **ASP.NET Identity** and **JWT**.
- Developed **audit logging** and **exception handling middleware** for system reliability.
- Created and executed **SQL Server stored procedures** for CRUD operations, reporting, and pagination.
- Designed a **normalized database schema** for Officers, Press Releases, Media Queries, Audit Logs, and Attachments.
- Participated in **testing and debugging** to ensure system stability and performance.

PERSONAL DETAILS

Name : Sarvasiddaiah Uddandam
DOB : July 01, 1990
Languages known : English and Telugu.
Nationality : Indian

Uddandam Sarvasiddaiah
(DotNet Full Stack Developer)
