

OBJECTIVE

To be involved in work where I can utilize skill and creatively involved with system that effectively contributes to the growth of organization.

PROFESSIONAL SUMMARY

- Having **9 years** of experience in analysis, design, developing web applications in MVC architecture, 3-tier architecture, desktop applications with windows forms and console applications for background automation process.
- Good in developing web applications in Microsoft Visual Studio .Net IDE by using **ASP.Net Core, .Net Core MVC, Asp.Net, C#.Net**.
- Good in developing Web APIs in Micro services architecture by using **.Net Core Web API, C#.Net ADO.NET, Entity Framework** and soap Web Services and parsing services responses by using different types of parsing methods (**JSON, XML**).
- Experience in writing Unit Tests (**TDD & BDD**) by using **Xunit, Nunit, Moq, FakeItEasy, ReSharper** (Code Coverage) and **Spec flow**.
- Experience in writing Database scripts using **MongoDB**.
- Experience in designing UI screens with **Html, CSS, and Bootstrap**.
- Writing client-side scripting code using **Java Script, jQuery**.
- Experience in writing Database objects (Stored Procedures, Functions, and Triggers) using **SQL Server**.
- Having experience in working with third party libraries like **amazon S3** service.
- Having good experience in source code management using **TFS, Bit Bucket and GitHub**.
- Good experience in **OOPS** concept.
- Ability to create loosely coupled components.
- Followed **AGILE (SCRUM)** methodologies, daily stand-up meeting.
- Ability to work in a team as well as individually.
- Proficient in Azure Cloud Services, with 1 year of hands-on experience.

TECHNICAL EXPERTISE

Microsoft Technologies	: ASP.NET Core, .Net Core MVC, .Net Core Web API, ASP.Net
Unit Tests	: Xunit, Nunit, Moq, Specflow, FakeItEasy, and ReSharper (Code Coverage)
Database	: SQL Server and MongoDB

Architecture	: Microservices Architecture, MVC and 3 Tier Layered Architecture
Code Quality Control	: SonarQube, Fortify, Veracode
Source Code Management	: GitHub, TFS and Bit Bucket
Client-Side Technologies	: HTML, CSS, Bootstrap
Client-Side Scripting	: Java Script, JQuery
Languages	: C, C#, and LINQ
Cloud Technologies	: Azure
IDE	: Visual Studio 2022, SSMS, Visual Studio Code
Tools	: Jira, Postman, Thunder Client
Others	: AJAX, JSON and XML

EDUCATIONAL QUALIFICATION

- M.C.A (Master of Computer Applications) with 75% from Andhra University in the year of 2014.

CERTIFICATIONS

- Completed the Certification of AZ-900 Fundamentals in November 2021.

PROFESSIONAL EXPERIENCE

- Senior Engineer - Development in Ness Technologies (India) Pvt Ltd, Hyderabad, Telangana from Sep 2019 to Till Date.
- Senior Software Developer in Avenue Realty, Vijayawada, Andhra Pradesh from Dec 2018 to Aug 2019.
- Software Developer in Dharani Info Technologies Pvt Ltd, Guntur, Andhra Pradesh from Sep 2014 to Dec 2018.

PROJECTS

Records Manager (RM)

Team Size	20
Customer	: Avenu
Role	: Senior Engineer – Development
Duration	: July-2023 to Till Date
Environment	: Visual Studio 2022, .Net Core Web API, Micro Services Architecture, C#, MongoDB, Swagger, LINQ, NUnit, Moq, Azure Event Hub, Azure Logic App, Azure Service Bus.

Description

System is designed for storing the data into the azure cloud, whenever customer wants to download or see the document, Customer need to pay the amount and after that customer able to see the document.

Responsibilities

- Creating the REST API based on Code Generator using Schemas.
- Implementing commands and events in Web Api's.
- Registered events in service bus.
- Implementing Azure logic apps.
- Designed and implemented MongoDB database schemas, ensuring efficient data storage and retrieval.
- Integrating MongoDB with backend systems and RESTful APIs.
- Implemented CRUD endpoints using ASP.NET Core Web API controllers, enabling clients to interact with MongoDB collections through HTTP requests.
- Designed and implemented a microservices-based architecture for a .NET Core application, using MongoDB as the primary database backend.
- Implemented distributed tracing and logging using tools like Serilog and DataDog, enabling end-to-end visibility into application performance and data flow.
- Working with Unit tests.
- Involved in User Story Grooming and Technical discussion meetings with Client and Business analysts daily.

JACK HENRY & ASSOCIATES (JHA)

Team Size 10

Environment : ASP.Net Core, .Net Core Web API, Micro Services Architecture, Datadog, Kafka, C#.Net, MongoDB, ADO.Net, Swagger, LINQ, XUnit, NUnit, Moq, SpecFlow, FakeItEasy.

Role : Senior Software Engineer

Duration : Mar-2022 to June-2023.

Description

As part of this project, we have worked on different modules like enterprise-logging and IRS modules.

- As part of the enterprise-logging module implementation we have implemented different dashboards, monitoring agents in data dog log management console and implemented custom API for log add and search mechanisms in soap and rest api's using data dog custom api's.
- As part of the institution service registry module, we have implemented custom api's for onboarding different financial institution information. And this information is used by all the products and services which are subscribed by the financial institutions.

Responsibilities

As a team member I involved in the following activities

- Involved in developing new services using Web API and soap services.
- Implemented different monitoring agents in data dog log management console.
- Implemented different dashboards to collect metrics from different services.
- Involved in issues fixing of the services during production phase.
- Involved in functional discussions with business teams to understanding the business requirements.

- Involved in complete agile life cycle like User Story Planning, development, and testing phases.
- Involved in migrating .net core microservices to .net 6.

CITY NATIONAL BANK (CNB)

Team Size 10

Environment : ASP.Net Core, .Net Core Web API, .Net Core MVC, Micro Services Architecture, ASP.Net, C#.Net, JQuery, SQL Server, Entity Framework, Swagger, Bootstrap, CSS, LINQ, XUnit, NUnit, Moq, SpecFlow, FakeItEasy.

Role : Senior Software Engineer

Duration : Sep-2019 to Feb-2022

Description

City Nation Business Online Banking is to create a streamlined customer experience for clients and colleagues. The primary capability of this project includes:

- Single Sign On to Digital Banking, Business Bill Pay, E-Deposit and City National Online (CNO) (CNOP, City National Online Personal) and International Business Online (“IBO”).
- Downstream “Coarse grained” entitlement (i.e., access to client admin screens and functional capabilities of Digital Banking, Business Bill Pay, E-Deposit)
- Profile Management (To include Clients, Client Administrators, Client Users).

Responsibilities

As a team member I involved in the following activities

- Involved in developing web applications for BOB module.
- Involved in migrating applications from ASP.Net into ASP.Net Core
- Involved in developing new services using .Net Core Web API.
- Involved in integrating different downstream services to BOB application.
- Involved in Jira issues fixing of the Web application and Services during production phase.
- Involved in migrating application from monolithic architecture to micro services architecture.
- Understanding the functional requirements and involved in requirements gathering to implement new services and coordinating with team members to implement new requirements.
- Involved in designing and coding.
- Used Entity Framework to implement data access layer.
- Written Necessary Stored Procedures
- Written Unit tests in Xunit, FakeItEasy (TDD) and SpecFlow (BDD)
- Written Automation Tests using C# with Selenium
- Working on Sonar Qube and Fortify issues.

PROPERTY SHIELD

Team Size 6

Environment : ASP.Net MVC, C#.Net, Bootstrap, JQuery, PostgreSQL, Entity Framework, CSS, LINQ

Role : Senior Software Developer

Duration : Dec-2018 to Aug-2019

Description

Property Shield is a marketing online web application that provides shields your properties, Lands, Plots, Apartments and Houses. It takes on average a year for property owner to realize that their property documents are tampered, or property is encroached.

We provide the ideal solution for busy owners or those residing far away or out of the country and cannot visit their property regularly. Ensure your property is safe from illegal tampering and encroachment with monitoring services you can trust. We offer you complete confidentiality and safeguards through our range of services – from inspection and notifying. We seek to offer you the very best solution in each category.

Our Services

Vault-a-Prop

- Free Service
- Store document details of every property you own.
- Store location details of every property you own.
- Share selected property details securely with your family/friends.

Shield-a-Doc

- Every month Cross-checking Government records of your properties to make sure documents are not tampered.
- Any changes to your records will be notified immediately.
- Snapshots of all your records will be archived in case you need in future.
- Share selected properties securely with your family/friends.

Shield-a-Prop

- Once every 4 months Cross-checking your property images to make sure property is not encroached.
- Any changes to your property will be notified immediately.
- Snapshots of all your records will be archived in case you need in future.
- Share selected properties securely with your family/friends.

Responsibilities

- Implementing functionalities using design pattern-oriented architecture includes service and MVC Architecture.
- Involved in adding new functionalities and enhancements to the application and managing complete release lifecycles.
- Worked on bug fixing and enhancements on change requests.
- Understanding the functionality and implementing the design using ASP.Net MVC, ASP.Net, C# and JavaScript.
- Analyze the defect, understand the requirement and provide the fix within time limit.
- Worked and co-ordinate with Client-side design development Team.

- Developed the client side as well as server-side Validations.
- Involved in developing the front-end UI screens.
- Performed debugging and testing.
- Followed AGILE (SCRUM) methodologies, daily stand-up meeting.
- Worked in File Uploading Process as Property Documents into Amazon S3.

LEGALPLEX

Team Size 10

Environment : ASP.Net, C#.Net, JQuery, Web Services, SQL Server, CSS, HTML

Role : Trainee Software Developer

Duration : Sep-2014 to Mar-2017

Description

- Legalplex is a marketing application that provides useful client leads, direct mail service, and practice management tools for attorneys.
- The service provided by this application connects attorneys with potential clients by providing timely updates on legal violations, lawsuits, and home foreclosures.
- Clients will login to this application and will choose exactly what kind of leads they receive by selecting the violations, lawsuits, and municipalities that interest them.
- This application also consists of case management system where users of this website can manage persons involved in the case, violations, attorneys involved for the case, memos, files, events, places, hours spent, hours note, invoices, payments, credits, and scheduled payments.

Responsibilities

- Involved in writing code for business logic and stored procedures.
- Downloading data from different courts.
- Uploading case information as files to amazon s3 server.
- Involved in working with different address cleaners APIs to clean address.

DriveSafeToday Team

Size 5

Environment : ASP.Net MVC, ASP.Net, C#.Net, ASP.Net Web API, JQuery

Role : Software Developer

Duration : Apr-2017 to Dec 2018

Description

Drive safe Today is an online learning web application for learning Defensive Driving which allows users to register for driving course online. Users went through the course, during course it will provide information how to drive safely. After successfully completion of course it will issue a certificate for the user through which user can apply for driving License. DriveSafeToday.com's court and DMV Accepted driver's education courses will help you remove points from your driving record, save money on car insurance, dismiss your speeding ticket, and earn your learner's permit. This is the easiest and most convenient way of completing a driver's education course.

Responsibilities

- Implementing functionalities using design pattern-oriented architecture includes service and Three Layer Architecture.
- Involved in adding new functionalities and enhancements to the application and managing complete release lifecycles.
- Worked on bug fixing and enhancements on change requests.
- Understanding the functionality and implementing the design using ASP.Net MVC, ASP.Net, C# and JavaScript.
- Analyze the defect, understand the requirement and provide the fix within time limit.
- Worked and co-ordinate with Client-side design development Team.
- Developed the client side as well as server-side Validations as per client requirement.
- Involved in developing the front-end UI screens as per client requirement.
- Performed debugging and testing.
- Followed AGILE (SCRUM) methodologies, daily stand-up meeting.
- Involved and worked with web APIs like Amazon S3 (Simple Storage Service).
